

**LISTING OF THE CLAIMS**

This listing of the claims will replace all prior versions, and listings, of the claims in the application:

1. (Original) An RNA compound between about 8 and 50 nucleobases in length targeted to human ICAM-1 mRNA, wherein said compound specifically hybridizes with said human ICAM-1 mRNA and inhibits expression of human ICAM-1 mRNA.

2. (Currently amended) The compound of claim 2 1 comprising between about 12 to 50 nucleobases in length.

3. (Currently amended) The compound of claim 2 1 comprising between about 15 to 30 nucleobases in length.

4. (Currently amended) The compound of claim 2 1, wherein said compound comprises SEQ ID NO: 22, 93, 96, 97, 100, 103, 104, 106, 107, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 122, 123, 124, 126, 127, 128, 129, or 130.

5. (Currently amended) The compound of claim 2 1, wherein said compound is double stranded.

6. (Currently amended) A double stranded RNA compound having comprising SEQ ID NO: 22, 97, 100, 103, 104, 106, 107, 110, 112, 113, 114, 115, 116, 117, 123, 124, 127, 128, 129, or 130.

7.-18. (Canceled)

19. (New) The compound of claim 4, wherein the compound further comprises a second RNA strand that is 100% complimentary to SEQ ID NO: 22, 93, 96, 97, 100, 103,

104, 106, 107, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 122, 123, 124, 126, 127, 128, 129, or 130.

20. (New) The compound of claim 19, wherein at least one strand of the RNA compound further comprises a two-nucleobase overhang of deoxythymidine (dT) at the 3' end of the strand.

21. (New) The compound of claim 20, wherein both strands of the RNA compound further comprise a two-nucleobase overhang of deoxythymidine (dT) at the 3' end of each strand.

22. (New) The compound of claim 6, wherein at least one strand of the RNA compound further comprises a two-nucleobase overhang of deoxythymidine (dT) at the 3' end of the strand.

23. (New) The compound of claim 22, wherein both strands of the RNA compound further comprise a two-nucleobase overhang of deoxythymidine (dT) at the 3' end of each strand.
